

The **WHO** claims that artemisinin is not able to be extracted in teas and tinctures, but did not actually test for this nor present evidence. In fact:

◇ **Artemisinin Extraction in boiling water is 92.7%;**

and;

◇ only plant artemisia ACTs can cure resistant malaria, which is caused by using only synthetic artemisinin in combined therapies- the opposite of what the WHO's claims.

#### **MISINFORMATION CAMPAIGNS BY WHO & BILL GATES, THE HEAD OF WHO:**

The **WHO** is giving the opposite of the truth regarding plant- based artemisinin with 8 other malaria fighting natural terpenes and polyphenols only found in whole plant therapies- Artemisia Annu, Philippina and Afra ( pACT) - vs taking only synthetic artemisinin in combined therapies with other synthetics. Only the plant based malaria therapy does not create resistance; not their synthetics which they mandate. Yet it is their 3- component synthetic therapy that created drug resistance malaria. So by these lies and mandates they are spreading ACT-resistant malaria all through Asia and Africa primarily!

**First-** The **WHO** claims the artemisinin can't be extracted in boiling water..the tests confirmed 92.7% of the artemisinin was removed by boiling water for tea or extract. This is part of the **WHO's** misinformation campaign against natural approved remedies because they are strictly controlled and financed by pharmaceutical companies and run by Bill **Gates Foundation** that finances start- up pharmaceutical companies ( he made \$200 million on covid vaccines in 1st year of pandemic.) Over the past two decades, the **Bill and Melinda Gates Foundation** has donated "a bit more than \$10 billion" into mainly three groups: the **Global Alliance for Vaccines** and Immunization, the Global Fund to Fight AIDS, Tuberculosis and Malaria, and the Global Polio Eradication Initiative ( where he created 48,000 polio paralysis cases in India out of

250k inoculated with 1940's Polio vaccine riddled with SV40, just like the sars- cov 2 vaccines. As a consequence he has a warrant for arrest in Delhi).

One of the Gates Foundation invested companies makes synthetic artemisinin; as opposed to artemisia annua that has been used for thousands of years to cure malaria. This is WHO'S lie number 1. Their leader has invested \$10 bn in vaccines and patented synthetic medicines, I'd say he has a vested interest in keeping herbal remedies out to make way for his failing vaccines like our series of covid vax and the catastrophic **Denvax**, that killed 12 children here in the philippines in first 6 months under criminal Dr Garin, your current Senator!

**Bill Gates investments:**

[https://docs.google.com/document/d/1hC4RCzrbIC\\_OjW0Y4w4yd-VSfXtbZsl8MFFfuvRO9s8/edit?usp=drivesdk](https://docs.google.com/document/d/1hC4RCzrbIC_OjW0Y4w4yd-VSfXtbZsl8MFFfuvRO9s8/edit?usp=drivesdk)

**Second** - There are nine anti- malaria compounds in plant artemisia annua artemisia Philippina and Afra:

**Artemisia Annua's 9 components that fight malaria:**

Artemisinin  
Artemelien  
Castisin  
Cercilineci  
Ascaridole  
Crysosplenitin  
Cercilineol  
Eupatorin  
Oceanic Acid  
Quercetin  
Crysosplenol-D

Dried whole plant Artemisia annua as an anti-malarial therapy

**The WHO** Does not recommend plant based, and only promotes and mandates synthetic therapies to avoid variability and resistance forming taking too little, and not having multiple vectors which these all synthetic artemisinin ACTs have- but only three compounds..however; they are mistaken because there are 9 anti- malarial components in artemisia annua; and synthetic artemisinin alone is not bioavailable. Thus, this is lie number 2- . Plus, whole plant material is 40 x's more bioavailable. Thus, you get ACT - resistant malaria when you only take synthetic Artemisinin, and; only recover and cure drug resistant malaria with whole plant artemisia annua combined therapy (pACTs, which also applies to artemisia philippina therapy) by pill or tea.

Whole plant studies showed parasites developed resistance much more slowly than to the pure drug showing natural combination effect (plant Artemisinin combination therapy, pACT)

by R Goel · 2022 · Cited by 1 — A therapy called *Artemisia annua* dry leaf antimalarial therapy (ALT) has been shown to be effective against artemisinin-resistant malarial infections.

**Current Conclusions and policy mandates pushed on the Philippines (based on misinformation);** and all countries made by WHO without presenting evidence or doing research for data:

- Case Reports: Small case reports have described successful treatment of severe, artemisinin -resistant malaria patients using dried-leaf *A. annua* tablets, after conventional ACTs had failed.
- Despite some promising experimental results, the use of dried whole-plant *Artemisia annua* for malaria therapy remains controversial and is not a medically approved or recommended treatment by major health organizations like the WHO. Current medical guidelines strongly emphasize the use of regulated, pharmaceutical-grade Artemisinin-based Combination Therapies (ACTs) to ensure efficacy, safety, and to combat the global threat of drug resistance.

Actually its proven that to cure drug resistant malaria you need to use plant based *Artemisia annua*, therapy - pACT; so, it's the opposite of what the WHO contends that only synthetic artemisinin should be used to treat malaria. Also, plant based *Artemisia* material is bioavailable and is absorbed 40 x's more! It appears they lied!

Bill Gates Foundation owns another malaria company that makes infertile male mosquitoes that are genetically modified to try and quell malaria mosquitoes by mating with female to lay eggs that maybe never hatch. It has never been proven and was turned down in Burkina Faso last month as being too dangerous. Burkina Faso will not be the guinea pig for something completely uncontrollable and unpredictable once set loose. One thing for sure. He needs a malaria pandemic or other mosquito- borne pandemic to force countries to buy these genetically modified insects without full environmental Engineering company that can be bonded and insured. Captain Traore Pointed out there are no guarantees these don't become super virulent

mosquitoes transmitters instead. And since there is no government experts that can Fisheries  
What other sneaking genetic upgrades to the mosquitoes, just like gain-of-function was done by  
NIH and Fauci in Influenza A in 2012 to make it aerosol contagious.
