Slide 2501

Stanford University found **Covid- Cicada in 20% of waste water sewerage facilities** in California in Early **April**.

Body sheds waste, while infected people also shed the viruses, bad bacteria, parasites, etc.. So, CDC is tracking covid viruses now through sewers.

And; both the CDC and WHO have issued active warnings. With **70 to 75 brand-new (synthetic) spike protein mutations**. As no vaccine works for it, plus synthetic spike proteins are highly mutagenic, with 75 novel spike profiles on one virus capsid. Thus, the odds against making a successful vaccine are hundreds of billions to one! This is where the already successful **anti-viral Artemisia Annua & Act Rx** (WWW.EGGPHARMA.COM) can save millions of people and cure long covid.

Meanwhile, these infected waterways have put all our farm animals under many unmitigated attacks, including Influenza, H3N2, Subclade K, Herpes, Hepatitis, BVD, and, have infected every class of farm animals from chickens to goats, rabbits and even juvenile young fish, as our waterways and sewers are covid infected with **Covid Cicada & Other viruses**. **Currently, sewage being placed on farms for fertilizer have created viral epidemics like bird and swine flu.**

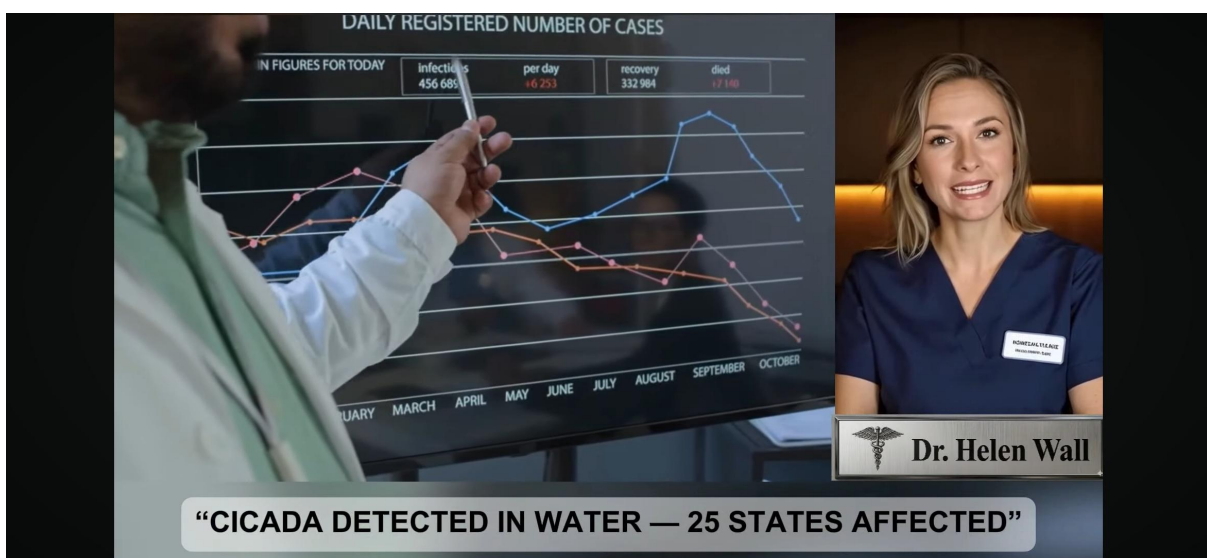

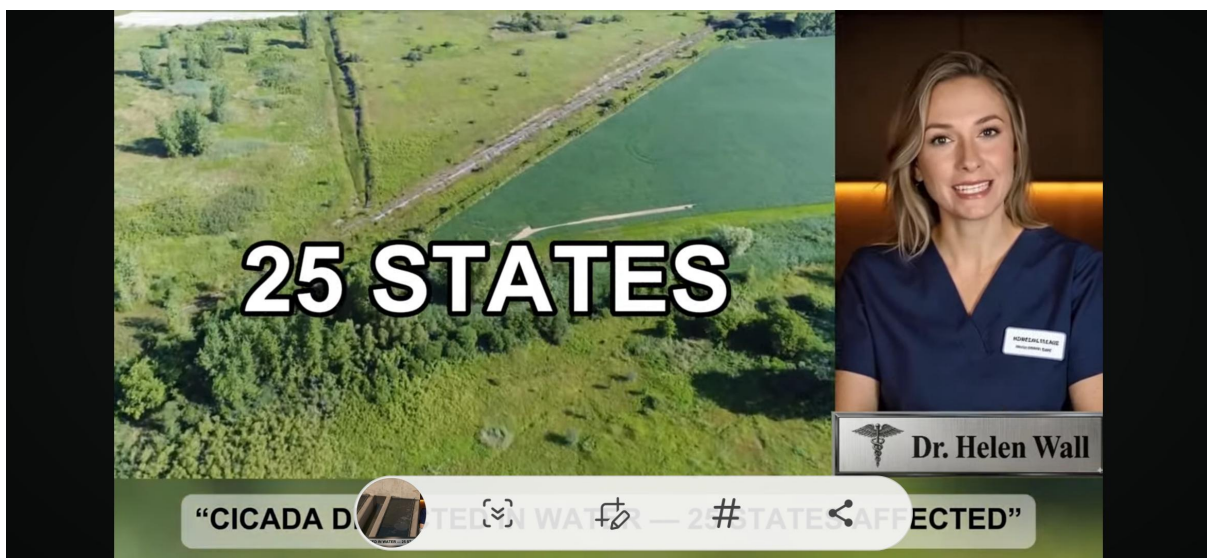

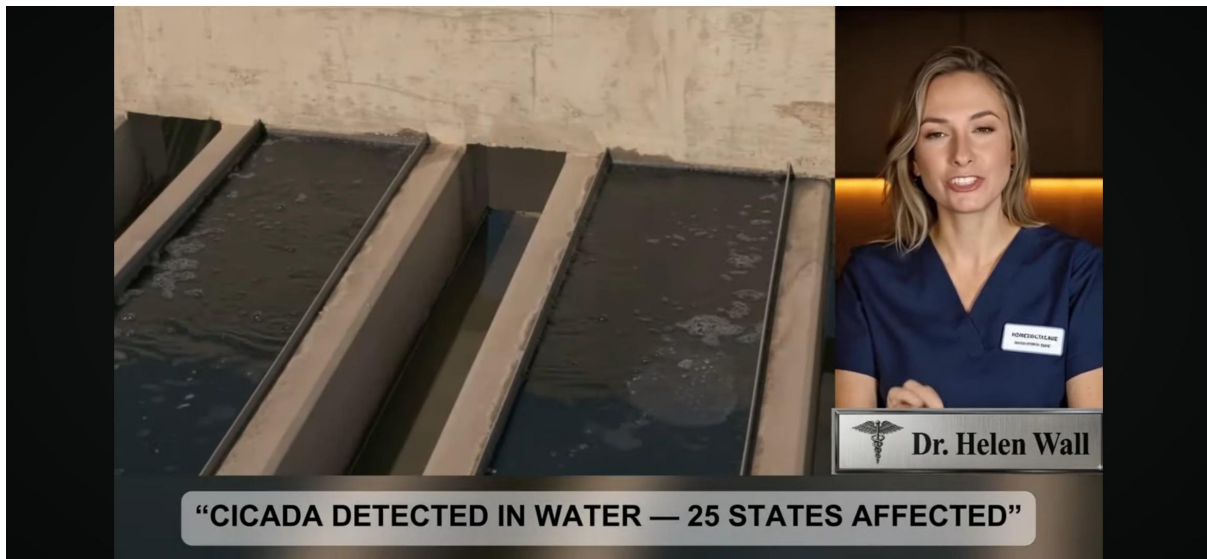

~Covid is in our sewer systems now tracked by CDC

~USA: In 25 states

~Heavily mutated Strain of covid.

~It's in our water supply

~It's in our sewers

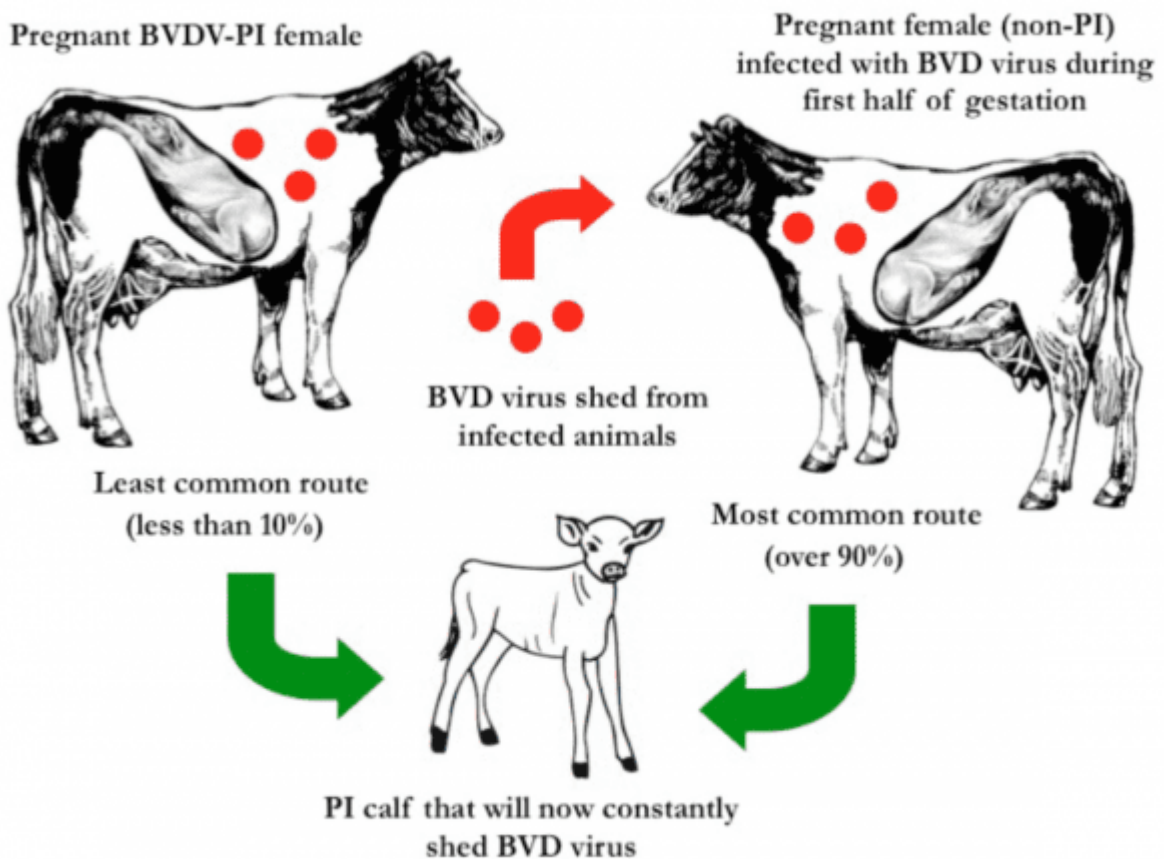

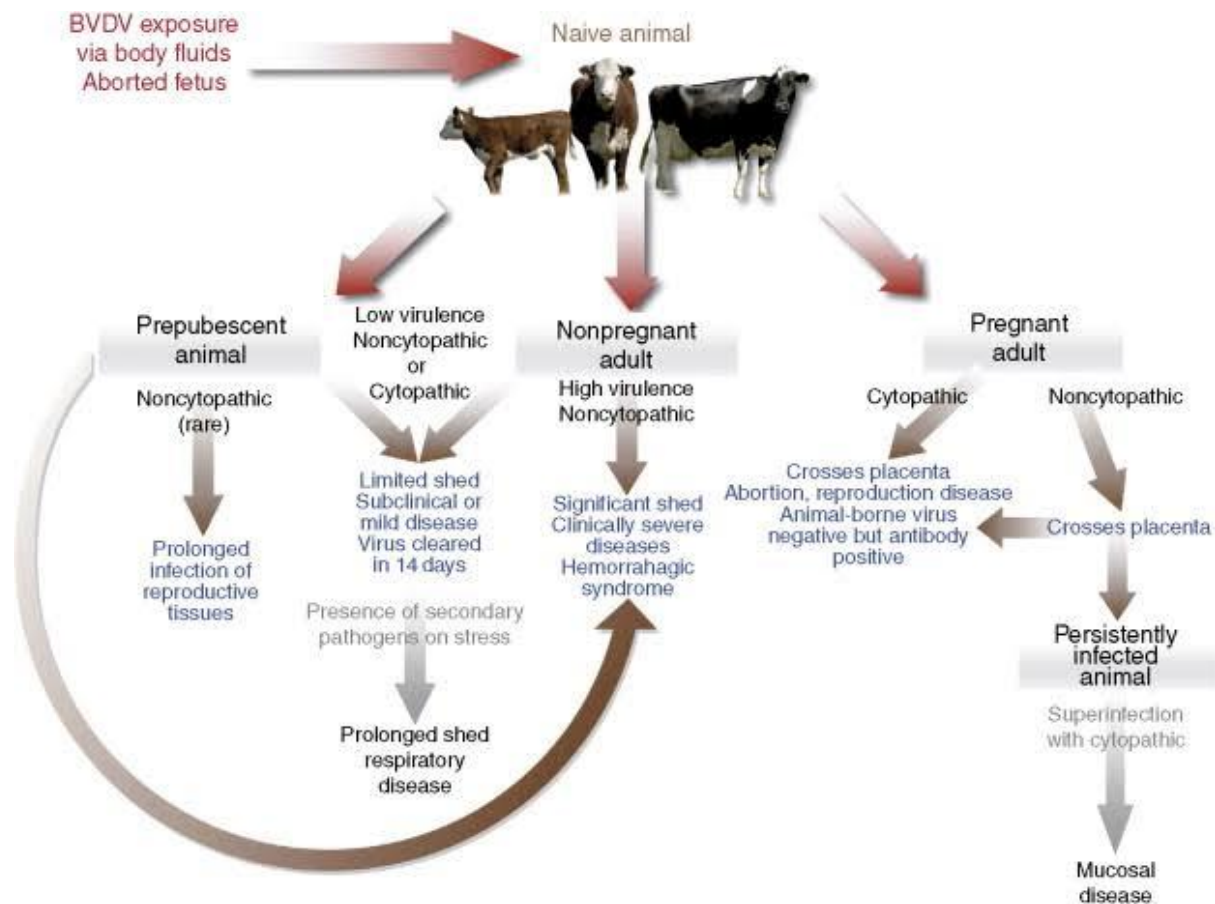

It is already too late to get ahead of it as far as the farm animals are concerned, Act Rx and Artemisia are available in pet food and animal/ fish food medicated pellets called:

Dr J's Pet Shield for farm and domestic animal dry food:

Avian and human cases of HPAI H5Nx since October 2020

Already, this variant is bypassing immunity from past infections AND current vaccines. Most Americans have no idea it's already spreading in their state.

A new COVID variant is actively spreading across the United States, with the Centers for Disease Control and Prevention (CDC) having already confirmed its presence in 25 states.

This new coronavirus strain presents concerning covid symptoms that many are currently unaware of, despite being flagged by the WHO and reported by major news outlets.
